

Priflex®

PRIFLEX® tracheostomy tubes are spiral-reinforced cannulas that combine a highly stable shape with soft and flexible material properties.

The flexible **PRIFLEX®** tracheostomy tubes feature an individually adjustable neck flange with soft and flexible wings which ensures accurate placement of the cannula. A scale on the tracheostomy tube facilitates the exact positioning.

PRIFLEX® tracheostomy tubes feature a firm 15 mm universal connector which enables the attachment of accessories (HME and speaking valves) as well as mechanical ventilators.

The metal spiral in the wall of the soft tube ensures that the tube retains its shape and it prevents kinking. Even the **PRIFLEX®** tracheostomy tubes with speech function have a continuous spiral reinforcement, in which a phonation sieving is imbedded.

PRIFLEX® tracheostomy tubes are high-quality sterile products made of latex-free medical-grade materials. These tracheostomy tubes are appropriate for insertion especially in ventilated patients, adipose patients and in case of postoperative oedema as well as a sunken tracheostoma.
